

## INTERNAL PUMP FORCED CIRCULATION

## (IPFC) EVAPORATORS

**recommended for large volume crystallization**

Patented IPFC provides a unique design with an integral circulating pump that eliminates expensive external piping, requires less space, and reduces installation costs. The separator is so efficient that carry-over problems are minimized.

- Prolonged continuous operation with fewer boil outs (even on normally fouling liquids)
- High turndown ratio
- Reduced operating cost due to lower horsepower requirements
