

Restoration of Dryer & Flaker Drums

Why should you have **Buflovak** inspect and restore your drums?

1. **Buflovak** has been designing and building drum flakers since 1913 and drum dryers since 1924. **Buflovak** is the only remaining major manufacturer of drum dryer and flakers in the U.S.A. We know more about drum dryers and flakers than anyone in the world.
2. **Buflovak** can help optimize the performance of your dryer or flaker for your particular process. **Buflovak** can reevaluate your product in its 10,000 ft² pilot plant. Most companies that resurface drums do not have an in-depth knowledge of dryer or flaker operation.
3. Drums are precision made pressure vessels and are the single most valuable component of dryers and flakers. The initial cost saving of a job-shop refurbished drum may be more than offset by the costs incurred due to suboptimal performance, shortened drum and bearing life, maintenance and downtime. **Buflovak** can inspect, rebuild, test, recertify and warrant your drums.
4. Drums are pressure vessels registered with the **National Board of Boiler & Pressure Vessel Inspectors**. **Repairs made by non-code shops not authorized by the National Board will void the ASME Certification!** Without this certification, compliance with provisions of state jurisdictions and the end user's liability insurance may be in jeopardy.
5. **Buflovak** is a board certified ASME code shop with both "U" stamp for new pressure vessels and "R" stamp for the alteration and repair of pressure vessels. The engineering staff is up to date with all code regulations and can perform finite element analysis for the most demanding projects. We have in-house radiography (RT), magnetic particle (MT), ultrasonic (UT) and dye penetrant (PT) testing equipment, a 15' x 22' oven for stress-relieving & post-weld heat treating (PWHT) and a 250,000 ft² fully-equipped shop. All drums are certified with documents submitted to the National Board.
